

Introducing the KID

Dan D'Agostino, C.E.O. and Chief Designer of Krell Industries, Inc., and a long-standing fan of iPod devices, often wondered what it would be like to design a dock built to Krell standards; specifically targeted toward the owners of hi-end audio systems and music enthusiasts alike. The result is the Krell KID (Krell Interface Dock).

The **KID** is the first product of its kind to utilize the fully differential output of the internal DAC for iPod devices—unaltered or modified—to deliver maximum sonic performance from this portable media.

Features

- Opto-isolated digital connections between device and KID
- Balanced differential Class A circuitry
- Ultra-low noise 255-step custom-taper volume control
- Digitally-controlled analog bass and treble controls
- Custom self-locating top loading cradle for iPod device
- Front panel located 1/8" stereo connector direct wired to the differential input
- Balanced and single-ended outputs
- Composite and S-video outputs
- RS-232 control
- Remote control
- \$1,500.00 U.S. retail
